

PRINTER SELECTION SYSTEM AND METHOD

Abstract of the Disclosure

5 A system and method of selecting a printer from a plurality of printers to
fulfill a print job of a user includes providing a printer selection system
controller having a printing capability of the printers registered therewith. The
printer selection system controller compares a print request for the print job with
the printing capability of the printers to determine which of the printers have the
printing capability to fulfill the print job. As such, the printer selection system
10 controller compiles a list of at least one printer which has the printing capability
to fulfill the print job and presents the list to the user.
